

session 16

Entry Planning Sheet

Observation	Sample Finding
Asset	ETHUSD
Timeframe	1 Hour
Price Position	Slightly Below SMA
SMA Direction	Slightly Upward / Recovering
RSI Value	63.07
RSI Zone	Neutral
Near Support	YES – around 2,640–2,660
Near Resistance	YES – around 2,685–2,700
Recent Candlestick	Bearish

Final Decision	Continuous observing
Reason	The price is around 2,678 , while the visible SMA is around 2,682 . Price is close to the nearby resistance area and is also above the recent support zone. Since RSI is not displayed and there is no confirmed breakout, it is better to observe the price action for confirmation rather than assume a direction.

session 17

Exit Planning Sheet

Observation	Sample Finding
Asset	ETHUSD
Timeframe	1 Hour
Current Trade	Short
Price Near Support / Resistance	Yes, near Resistance
RSI Value	48.73
RSI Observation	Neutral
Candlestick	Bearish candle near Resistance
Final Decision	Hold

Reason	The price is around 2,679.7 and is close to the nearby resistance level around 2,685–2,787. RSI at 48.73 is in the neutral zone, while the latest candle is bearish, showing some selling pressure. Since there is not enough confirmation for a strong downward move, it is better to hold and wait for a clear bearish breakout or reversal confirmation before taking further action.

session 18

Trading Plan Review and Execution Report

Field	Details
Asset	ETHUSD
Timeframe	1 Hour
Trade Position	HOLD
Original Entry Plan	Near Resistance
Original Exit Plan	Near Resistance
Were Current Market Conditions Different from the Original Plan?	Yes
Were Any Revisions Made?	Yes
If Yes, Describe the Revisions	Entry was not taken; the trade was kept on hold and the market was observed for further confirmation.
Reason for the Revision	The price was near resistance, but RSI was neutral at 48.73 and the bearish movement was not strongly confirmed. Therefore, entering the trade was avoided.
Final Trading Decision	Continued Observing
Trade Status	No Trade Executed
Was the Trading Plan Followed?	Yes
Outcome (if executed)	Not Applicable – No Trade Executed
Key Learning	Do not enter a trade without sufficient confirmation. When price is near resistance but momentum is unclear, it is better to wait for a confirmed bearish reversal or breakout rather than forcing a trade.
